

Team Participation Note

For this project I completed all implementation and integration work myself. I scheduled multiple check-ins, shared a written outline, and provided step-by-step instructions so that the rest of the group could contribute. Two teammates attempted to help but were not able to complete any working code or notebook sections; the remaining teammates did not participate despite reminders.

All agents (Product Q&A, Orders, Refund), LangGraph routing, MemorySaver setup, supervisor graph, local Ollama configuration, debugging, and the final HTML “slides”/presentation were implemented, tested, and documented by me.
